

High speed Wi-Fi router for Wireless USB modems Easy-to-use networking for shared connectivity

- > High speed Wi-Fi (MIMO 160Mbps)
- > Use your wireless USB modem to connect up to 64 PCs to Internet
- > Supports file and printer sharing
- > Stylish and compact 'go anywhere' form factor

(*) Wireless USB modem not included

GlobeSurfer® X·1

With its smooth lines and small footprint, the stylish GlobeSurfer® X·1 from Option® is ideal for creating easy-to-use wireless and wired networks in the office, at home, or anywhere collaborative working is required.

As a standalone device, this wireless cradle provides you with unparalleled LAN speeds of up to 160Mbps.

For easy Internet access, simply plug your current USB modem stick into the cradle and follow the USB Modem Internet Connection instructions. A second USB port offers additional high-end functionality such as Print Server and File Server for excellent local networking capabilities.

Two further Ethernet ports provide connectivity to users without wireless functionality. Connecting an ADSL modem to an Ethernet port allows you to manually switch between ADSL and 3G - keeping you on the Internet when your ADSL line fails.

Specifications

IEEE 802.11b/g and n (MIMO)

WLAN Access Point

- > WEP, WPA, WPA2
- > Option to disable WLAN radio

USB

- > Support for External NAS HDDs or USB printers
